

Is in this context that we see the need and relevance to continue moving forward in global programs that allow us to face challenges such as Food Loss and Waste, monitoring our impact and establishing commitments in four lines of action:

- 1 Internal Efficiency: purchase, logistics, transport and handling;
- 2 Donation;
- 3 Final Disposition; and
- 4 Responsible Consumption.

- Permanently promote improvements in the estimation of demand for our products to **purchase** what is necessary and thus reduce the losses.
- Improve **logistics processes** in order to prolong the availability of our products to be purchased by customers, as well as seek local and regional productions in order to promote the **efficient transport** of these.
- Continue to work responsibly with our teams in the care and **proper handling** of food throughout the supply chain.

- Continue to promote sustainable processes and alliances for the **donation** of products that are safe for human consumption, in a socially responsible way, managing their delivery through organizations that allow us to reach the most vulnerable groups in our surroundings.

Manage the final disposition of products in a conscious and responsible manner

- Continue to develop processes and alliances to manage the **final disposal** of products in an environmentally responsible way, reducing waste and preventing its final destination from being landfills.

Promote responsible consumption

- Continue the awareness of our customers in order to generate **responsible consumption** habits, both at the time of making purchases and during the subsequent handling, conservation and use of food in their homes, thus reducing their organic waste.

In Cencosud we are committed to the challenge of being more efficient every day to avoid and reduce the food loss and waste, through a socially and environmentally responsible management, in harmony with our environment, thus contributing to the growth and strengthening of our society.
